

Solar power cars for sale

Overview

What is Aptera solar electric vehicle?

Aptera is the world's first Solar Electric Vehicle that requires no charging for most daily use - giving you the freedom to do more with less impact on the planet.

How efficient is a solar-powered electric car?

The ultralight bodywork, uber-slick aero, and tires with very low rolling resistance help make the Aptera solar-powered electric car four times more efficient than typical electric sedans, earning about 10 miles per kWh.

Does Lightyear have a solar-powered electric vehicle?

His work has appeared in The New York Daily News and City & State. EV startup Lightyear revealed its first solar-powered electric vehicle, dubbed Lightyear 0, at an event this week in the Netherlands. The vehicle, which Lightyear describes as production-ready, has 388 miles of range, 44 miles of which are derived from solar power alone.

Which companies are working on solar-powered electric cars?

German startup Sono Motors is also working on a solar-powered electric car. Mercedes-Benz's Vision EQXX concept includes a solar roof array of 117 cells. And Toyota has promised an optional solar roof for its recently released BZ4X electric SUV.

Can solar cells power an electric vehicle?

Using solar cells to power an electric vehicle is no small feat. There's a huge disparity between the amount of solar energy that the best cells can capture and what's needed to make a two-ton vehicle move at speed. But Lightyear seems further along than most companies pursuing similar projects. There's a spec sheet! And a production timeline!.

Are solar electric cars still viable?

Nearly 70 years ago, the idea of a viable solar car concept was introduced to the world in Chicago, Illinois. While these vehicles started small (literally), they have progressed alongside the sustainable technology segment to a point where scalable solar electric vehicles are closer than ever, but there's still plenty of room for innovation.
