Overview

How is solar energy generated?

Solar energy - Electricity Generation: Solar radiation may be converted directly into solar power (electricity) by solar cells, or photovoltaic cells. In such cells, a small electric voltage is generated when light strikes the junction between a metal and a semiconductor (such as silicon) or the junction between two different semiconductors.

How can solar energy be converted into electricity?

Using photovoltaic cells (also called solar cells), solar energy can be converted into electricity. Solar cells produce direct current (DC) electricity and an inverter can be used to change this to alternating current (AC) electricity. This electricity can be stored in batteries or other storage mechanisms for use at night.

How do I set up a solar cell experiment?

Set up your experiment, as shown in Figure 1. Set up your lamp a fixed distance from where you will test the solar cell. If you are doing the project outside, set up your experiment in an area with direct sunlight. Connect your multimeter's leads to the solar cell's alligator clip leads.

What is solar energy & how does it work?

Solar energy can be part of a mixture of renewable energy sources used to meet the need for electricity. Using photovoltaic cells (also called solar cells), solar energy can be converted into electricity. Solar cells produce direct current (DC) electricity and an inverter can be used to change this to alternating current (AC) electricity.

How do you use a solar cell?

Connect the solar cell with the electric motor and a DMM to measure current. Record the solar cell current and observe the turn speed of the propeller of

the electric motor. Without changing the desk lamp and solar cell distance, cover the solar cell with a blue filter.

How do you calculate solar cell efficiencies?

This is calculated by dividing a cell's power output (in watts) at its maximum power point (P) by the input light (E , in W/m^2) and the surface area of the solar cell (A in m^2). (W) $V I$ (2) By convention, solar cell efficiencies are measured under standard test conditions (STC) unless stated otherwise.
