

Solar power generation in rainy days

Overview

Solar panels can still generate electricity during light or moderate rain showers, although at a lower rate than on sunny days. What happens to solar energy when it rains?

But if you have solar or are thinking about installing panels on your home, you may wonder what happens to the energy your solar system produces when it rains. The short answer: your solar panels will still capture and convert light into electricity during rainy or cloudy weather.

Do solar panels work on rainy days?

If you want a simple answer then, yes solar panels do work on rainy days, although they are not fully efficient. So if you are going to rely on solar energy alone to run most of the home appliances then it is important for you to understand how efficient they can be on rainy and cloudy days.

How much power does a solar system generate during the rainy season?

During the rainy season, we get to see cloudy weather and in this weather, there is a very limited amount of sunlight during the day. Numerous tests show that they can generate 20 to 40% of the normal power they should on normal days. The below stats from ResearchGate will give you a brief idea of power generation during sunny, cloudy & rainy days.

Can solar panels generate electricity on cloudy or rainy days?

Let's get started! Solar panels can still generate electricity on cloudy or rainy days, with an expected output of 10% to 25% of their total capacity. The efficiency of solar panels is influenced by various factors, including temperature and the edge-of-cloud effect, which can enhance power production.

What happens to solar panels during rainy seasons?

The power output during rainy seasons may be insufficient to meet high

energy demands. Rainy seasons often bring with them the harshest storms, including strong winds and heavy rains. These extreme weather conditions can pose a risk to the physical integrity of solar panels and their supporting structures.

Do solar panels produce electricity if it rains?

We need to understand that if sunlight is limited, so is energy production. On cloudy or rainy days, PV panels typically produce anywhere from 10% to 25% of their optimal capacity, experts say. * The amount of electricity your solar panels will generate will depend on the density of cloud coverage or extent of rain.
