

# **Solar power system not working**

## Overview

---

Why are my solar panels not working?

Your solar panels not working could be from several different issues, including:

1. Lack of sunlight If your solar panels are shaded or concealed by trees, buildings, or debris, they may not receive enough sunlight to perform correctly. So, when installing solar panels, it's best to have them in a suitable location to avoid this issue.

Do solar panels cause problems?

Thankfully, the rate of problems arising from solar panels is fairly low. Some 68% of solar panel owners told us they'd had no technical issues with their solar pv systems since they were installed. And nearly half of owners had done no maintenance at all on their solar panel system since it was fitted.

Why are solar panels not generating enough power?

Dirt, debris, or bird droppings accumulating on the surface of the panels can also hinder sunlight absorption, resulting in reduced power output. Another potential cause of insufficient power generation is a faulty solar inverter, which converts the panels' direct current (DC) generated into usable alternating current (AC).

What should I do if my solar panels don't work?

Checking for shade on your panels - trees and shrubs that grow and block the sun from your panels will affect the amount of electricity they produce. So it's good practice to prune them back. Keeping an eye out for birds or squirrels nesting under your panels. They can cause damage, as well as soiling your panels.

What causes a faulty solar panel system?

Probably the most common issue found on faulty solar panel systems isn't actually the panels themselves - it's all down to the inverter. The inverter

converts the direct current (DC) generated by the panels into alternating current (AC), which powers the electrical components around your home.

What happens if a solar panel fails?

It's also possible that one solar panel in your pv array failed. As the pv modules are connected in series, one failing pv module will shut down the entire system. If your solar system is not delivering sufficient power for which it is rated for, the resulting situation is called a low power situation.

## Solar power system not working
