

Solar system comparison size

Solar system comparison size

[The Solar System to Scale: Dynamic 2D Model](#)

1 pixel = 1,000 km. This 2D visual model illustrates the scale of the sun and planets in our solar system, and their current distance from each other. The Solar System to Scale in which every pixel on the screen represents 1,000 kilometers.

[Solar System Size and Distance](#)

But, compared to some of the planets in our solar system, it's pretty small. We often see planets displayed as similar in size, like this, to make details on smaller planets easier to see. In reality, the size of planets compared to each other looks more like this.

Sizes of the planets , Interactive , Britannica

Table of Contents The solar system has two main types of planets. The inner planets--Mercury, Venus, Earth, and Mars--have rocky compositions. In contrast, the four outer planets, also called the Jovian, or giant, planets--Jupiter, Saturn, Uranus, and Neptune--are large objects that are composed primarily of hydrogen and helium (Jupiter and Saturn) or of ice, rock, hydrogen, and ...

Compare Planet Sizes

This interactive lets you compare the sizes of planets in our Solar System. It does NOT show where they are in the Solar system or how far

apart they are from each other. Move the slider to zoom in and out. You can hide the planet labels text and/or the distance

[The Scale of the Solar System](#)

The next biggest object in the Solar System is Jupiter, a gas giant planet. Its mass is about 318 times that of the Earth. A solar eruption captured by SOHO (Solar and Heliospheric Observatory). The Earth is shown here for size comparison. Image credit: SOHO

[How Big Is the Solar System?](#)

In an effort to bring these vast distances down to Earth, we've shrunk the solar system down to the size of a football field. On this scale, the Sun, by far the largest thing in our solar system, is only a ball about two-thirds of an ...

Solar System

Compared to many extrasolar systems, the Solar System stands out in lacking planets interior to the orbit of Mercury. [70] [71] The known Solar System lacks super-Earths, planets between one and ten times as massive as the Earth, [70] although the hypothetical Planet Nine, if it does exist, could be a super-Earth orbiting in the edge of the Solar System.

Solar System Size Comparison

Comparing the sizes of all the rocky planets, Mercury, Mars, Venus and Earth, to the gas giants Neptune, Uranus, Saturn and Jupiter. And then comparing those Comparing the sizes of all the

Planet Compare

NASA's real-time science encyclopedia of deep space exploration. Our scientists and far-ranging robots explore the wild frontiers of our solar system. This site is maintained by the Planetary Science Communications team at NASA's Jet Propulsion Laboratory for NASA's Science Mission Directorate.

How big is the sun? Facts & size comparison

In this article, we will compare the size of the Sun with the size of the planets as well as the size of the biggest stars known to date. To fully understand the scale of our sun, let's compare its size to each planet of our solar system. Mercury: The Sun is 277 times larger than Mercury. 21 million Mercury-sized planets could fit inside the Sun.

How Big is Our Solar System? 1

(4.5 billion kilometers). Compare this to the farthest distance you can walk in one full day (70 miles) or that the International Space Station travels in 24 hours (400,000 miles). The best way to appreciate the size of our solar system is by creating a scaled model

Size of Planets in Order

The size of planets in our solar system varies dramatically. Let's explore the sizes of the planets, including their radius and diameter in both kilometers and miles, and their relative sizes compared to Earth. Also, discover the impacts of the significant size

Sizes of the planets , Interactive , Britannica

The solar system has two main types of planets. The inner planets-- Mercury, Venus, Earth, and Mars --have rocky compositions. In contrast, the four outer planets, also called the Jovian, ...

Solar System Size Comparison , 3D Animation Size Comparison

Solar System Size Comparison , 3D Animation Size ComparisonIn this video we made 3d Comparison of Solar System and this is true real scale comparison of Sola Solar System Size Comparison , ...

[Solar System Size and Distance](#)

How big are the planets and how far away are they compared to each other? See how the sizes of planets and the distances between them compare. And find out why it's so hard to create a scale model of the solar system that accurately represents both size

Solar System Size Comparison

This video shows how dramatically different the planets in our solar system are in size. MUSIC : CO.AG Music Access Astronomy Part 2 - Futuristic Sci-fi Elec This video shows how dramatically

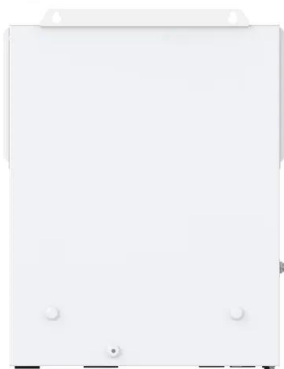

Comparing Objects in Our Solar System by Rotation, ...

This video offers a new perspective on objects in our solar system, comparing them by their size, rotational speed, and tilt. Which Companies Own the Most Satellites? Nearly 7,000 satellites orbit the Earth, ...

planet bouncing , Solar System Planet Size Comparison 3D

planet bouncing , Solar System Planet Size Comparison 3D Star Size in Perspective , 3d Animation Size Comparison In this video, we made a 3d Comparison of Star planet bouncing , Solar System

Comparison of Planet Sizes: Solar Systems

This slide shows how dramatically different the planets in our solar system are in size. Some of the smallest bodies in our solar system are shown in the first view, from Ceres to ...

Solar System Sizes

This artist's concept shows the rough sizes of the planets relative to each other. Correct distances are not shown. Mercury - 1,516mi (2,440km) radius; about 1/3 the size of Earth Venus - 3,760mi (6,052km) radius; only slightly smaller than Earth Earth - 3

A Planet Size Comparison , AstroCamp Science Camp

But how different are these sizes? To demonstrate this we can use a 1 pound chunk of clay. Roll it out into as symmetrical a log as you can. Cut it into 10 equal pieces. Jupiter, the largest planet in the solar system, takes ...

The Planets in Our Solar System in Order of Size

Planets in our Solar system size comparison. Largest to smallest are pictured left to right, top to bottom: Jupiter, Saturn, Uranus, Neptune, Earth, Venus, Mars, Mercury. If you're interested in

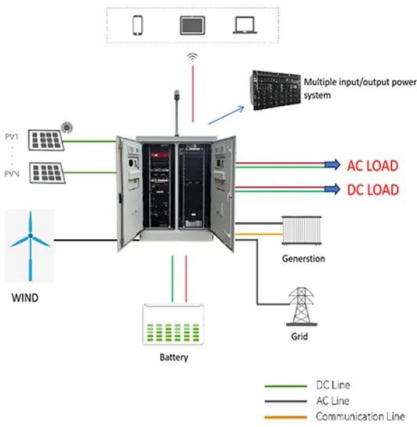

Solar System Objects Sorted by Size: Understanding our ...

Our solar system has only one star, the Sun. However astronomers have observed that multiple solar systems, with two, three or more stars, are numerous. Without competition, the Sun has become gigantic, it has captured 99.86% of the total mass of dust and

List of Solar System objects by size

The following objects have a nominal mean radius of 400 km or greater. It was once expected that any icy body larger than approximately 200 km in radius was likely to be in hydrostatic equilibrium (HE). [7] However, Ceres ($r = 470$ km) is the smallest body for which detailed measurements are consistent with hydrostatic equilibrium, [8] whereas Iapetus ($r = 735$ km) is the largest icy body ...

Planet Size Comparison

This interactive feature lets students compare the sizes of the planets in our solar system. Users can select two solar system bodies (planets, Sun, Earth's moon) and view side-by-side images at the same scale, along with their diameters in kilometers or miles, and a ratio. Science NetLinks is part of MarcoPolo, a partnership between the Verizon Foundation and eight premier ...
