## Overview

---

The most common way to install solar thermal collectors is to mount them directly onto your property's rafters using specialist roof hooks, mounting frames and clamps. If your property has more than one story, you may need to hire scaffolding (at an extra expense) in order to gain roof access, though compared with PV.

The standard on roof panel mounting system is constructed of stainless steel brackets that are fitted underneath the solar thermal panels. The.

An in roof solar thermal system is built into the roof of the property. An in roof solar system looks more aesthetically pleasing but is more complex to.

The flat roof solar thermal mounting system is a popular method of mounting the panels to commercial and office buildings, for example. A.

The solar tile system is another form of in-roof mounting with a few key differences. Solar tiles achieve the same stylish aesthetic look as in roof systems but are more suited to new build properties, a re-roofing project or a new.
