How does the Conext XW series inverter/charger detect a fault?

When the Conext XW Series Inverter/Charger detects a fault condition, the fault is displayed on the Conext XW System Control Panel. The Conext XW Series Inverter/Charger also illuminates the Fault light on the Conext XW System Control Panel and inverter information panel. A fault affects the operation of the unit.

Is the XW a good inverter?

The XW is more or less the defacto inverter standard. The history of these units goes back years and years. I still have a functioning trace 4024 on a shelf. The XWs are rock solid. The only way you can kill them is lightening or if you perform lots of generator cut outs where you cut off generator input under load.

Can the XW pro be used with a microinverter?

The XW Pro with compatible Li-ion batteries can be used with AC coupled PV inverters or microinverters. The XW Pro will regulate charging from the AC coupled PV inverters using frequency shifting, based on the battery charging limits and SOC information communicated by the BMS.

How do XW pro inverters communicate with a battery management system?

The XW Pro inverters communicate with third party devices, such as a Li-ion Battery Management System (BMS), through the Conext Gateway, InsightHome, or InsightFacility. These devices provide a CAN Bus or Modbus RTU interface for BMS communication. The BMS communication can only work with compatible batteries listed in this document.

Can XW pro inverters be installed without BMS communications?

Systems with multiple XW Pro inverters and/or DC coupling with Conext MPPT solar charge controller may be installed without BMS communications subject

to the battery vendor approval of the use-case. A Conext Battery Monitor is recommended for these applications to monitor the battery SOC.

What happens if you touch a metal part of a XW inverter?

Touching a metal part of the inverter/charger that is not powder coated such as sheet metal parts. Failure to follow these instructions can result in damage to equipment. Chapter 1 contains information and procedures to help you troubleshoot the Conext XW Inverter/Charger.

### Schneider xw pro 6848 not powering up with eg4 lithium battery

I recently purchased 4 of the eg4 lifepower batteries to replace my 48v crown cr430 flooded lead acid setup. I installed the four batteries in the rack made for these batteries and checked voltage on each module before paralleling. All modules showed 52.8 volts. I set all of the dipswitches as

### Schneider XW vs Sol-Ark , Page 4 , DIY Solar Power Forum

Schneider handles PV going to Load going through an inefficient method. Schneider Power Goes From PV to DC Charger to Battery to Inverter which I am told gives it an efficiency of 89% total efficiency BTW that 93% efficiency Schneider lists is just for the Battery

Schneider Conext XW Pro 6848

The XW Pro 6848 does not have a built in solar charge controller only an AC charger. Solar charge controllers are separate items that connect to the batteries (or battery bus bar) directly so the inverter output is limited to what the inverter and/or batteries can supply.
