Overview

How does WeChat login work for third-party apps?

WeChat login for third-party apps is based on the OAuth 2.0 standard (OAuth 2.0 is the industry-standard protocol for authorization). After a user has given permission, the OA will receive a special API calling certificate (authorization access_token). Based on this access token, the OA may call APIs and obtain the user's basic information.

How does WeChat authorization work?

A simplified authorization flow: Step 1: User clicks WeChat login and grants authorization. Step 2: OA gets a temporary code. Step 3: Based on the code, OA gets access_token from server. Step 4: OA obtains users' basic data with access_token and OpenID. What is Silent Authorization?

.

What happens when a third-party app initiates a Weixin login authorization request?

1. When a third-party app initiates a Weixin login authorization request, after a Weixin user grants authorization to the third-party app, Weixin will launch the app or redirect to the third-party website and carry the authorized temporary ticket code parameter. 2.

What is WeChat open platform?

The Open Platform 开放平台 connects your app or website to WeChat's mobile services including user authentication and payment. WeChat Open Platform is a hub for mobile applications, website applications, Mini Programs, Official Accounts (OA) and third-party platforms. What are OpenID and UnionID?

.

What is a WeChat unionid?

UnionID is a unique ID to identify a single user under the same WeChat open platform account. If a developer possesses multiple mobile applications, website applications, and OAs (including Mini Programs), they can use a UnionID to differentiate the uniqueness of users.

How do I implement WeChat login in my App?

Before implementing WeChat login in your app, you'll need to register a developer account on the developer portal, have your app approved, and obtain the corresponding AppID and AppSecret. Login functionality will be available after your application has been approved.
