

Storage box for lithium ion batteries

Overview

How do you store a lithium ion battery?

In general lithium-ion batteries should always be removed from the devices they power and stored at 60-70% of the pack's capacity. If a battery will go unused for three more days, it should be stored in a cabinet or larger store. Once disconnected, storing lithium-ion batteries follows similar principles as the correct storage of chemicals.

What types of storage cabinets are available for lithium-ion batteries?

Various cabinet sizes and equipment variants are available for the safe storage of lithium-ion batteries. There are safety cabinets that are used exclusively for the passive storage of batteries, as well as those that allow both the storage and charging of lithium-ion batteries.

Are there safety cabinets for lithium ion batteries?

There are safety cabinets that are used exclusively for the passive storage of batteries, as well as those that allow both the storage and charging of lithium-ion batteries. ION-LINE passive storage safety cabinets offer a standard 90-minute fire resistance rating both from the outside to the inside and vice versa.

Are lithium-ion batteries safe to store?

Lithium-ion battery fires can even reignite after being contained. In this post, we'll talk through the safe storage requirements for lithium-ion batteries that manage the risks to keep people and facilities safe. The UK doesn't have specific regulations or legislation for the general storage of lithium-ion batteries.

How to store batteries in the Ion-line safety cabinets?

If you only want to store batteries in the cabinet, choose the STORE version. If you intend to charge (active storage) batteries directly in the cabinet, then

choose the CHARGE version. ► Find out exactly how the safety concept of the asecos ION-LINE safety cabinets works in our video.

Why do you need a lithium ion battery cabinet?

These cabinets effectively prevent a fire from spreading from the outside to the batteries stored inside. At the same time, the risk of a fire inside the cabinet caused by the lithium-ion batteries or accumulators is also minimised because spread to the surrounding area is prevented.
