

Subsidy for self-built wind power lines

Overview

Are UK wind farms getting a subsidy?

For the first time ever, the giant fleet of UK wind farms are earning the government money. Under the British system, power producers only get a subsidy if the wholesale price is below a certain threshold.

Why have the UK government increased offshore wind subsidies?

You'll also receive our weekly Editor's Digest Newsletter. Full The British government has increased the subsidies available to offshore wind developers by up to two-thirds in an effort to revive new projects in a sector that is struggling with surging costs.

How much does offshore wind subsidy cost?

Eight of the 41 offshore wind farms took more than 50% of that total, with Hornsea taking 11% or £480 million. Statements from official sources, carelessly echoed in the press, may have given the impression that the unit subsidy cost in £/MWh, and thus the total cost to consumers of subsidy to offshore wind has been falling.

Are new offshore wind farms really subsidising wind bills?

“Through contracts for difference, the big new offshore wind farms have been effectively subsidising bills roughly to the tune of the constraint payments going to wind.

How does a wind farm subsidy work?

The CfD provides subsidy as a top up payment that the generator receives over and above a reference price (essentially the wholesale market price for electricity) to match a strike price, in essence a guaranteed price, that the wind farm owners were awarded in their contracts.

Which offshore wind farms are subsidised under the Ro?

There are three special case offshore wind farms subsidised under the RO with extremely high levels of subsidy, namely the Aberdeen Offshore demonstration unit which receives 2.5 ROCs per MWh, and two floating offshore wind farms, Hywind and Kincardine, which receive 3.5 ROCs per MWh.

Subsidy for self-built wind power lines
