

Successful bid price of BESS project in Netherlands 2030

Overview

The successful bids receive a premium price per kWh, with bids ranging from EUR0.0776-0.0878/kWh (USD0.083-0.094). A total of 175MW, 21 successful bids, went to solar projects planned in 500-metre-long strips adjacent to motorways and railway lines. What are the economic opportunities for Bess assets within a Dutch electricity market?

We highlight the economic opportunities for BESS assets within one of the Dutch electricity markets in this article. The Dutch electricity market is undergoing a significant shift towards renewable energy, primarily solar, wind, and other sustainable sources.

How does a Bess project make money?

In wholesale markets, BESS projects can generate a revenue by extracting electricity from the grid when it is abundant, and therefore cheap, such as midday on sunny days, and selling it back to the grid during periods of high demand. The price spread is largely influenced by the electricity system.

Is the Dutch Bess market a good investment?

This document is for information purposes only and is not, and should not be construed as, an offer, invitation or recommendation. The Dutch BESS market offers strong potential amid rising flexibility needs, but faces grid and policy hurdles. Still, investor interest and regulatory innovation grow.

What is a Bess project?

BESS projects can provide additional flexibility to the grid by storing excess renewable energy and making it available when demand is high. By leveraging the spread between low or negative prices during periods of excess renewable production and high prices during peak demand, BESS operators can generate revenue from arbitrage opportunities.

What is the grid fee burden on Bess in the Netherlands?

Chart 1 illustrates the scale of the grid fee burden on BESS in the Netherlands to date. Grid fees at this level represent roughly 25-50% of the total revenue capture of BESS assets, a substantial hurdle for building a viable investment case. So what changes are taking place to make the system friendlier for BESS assets?

.

What balancing services does the Dutch Bess project use?

Dutch BESS projects mainly participate in two balancing services: Frequency Containment Reserve (FCR) and automatic Frequency Restoration Reserve (aFRR). The Dutch TSO, TenneT, uses these services as the primary and secondary restoration services, respectively, as explained in RaboResearch's report on the Dutch electricity sector.

Successful bid price of BESS project in Netherlands 2030

Netherlands allocates EUR100m for PV co-located BESS ...
