

Successful bid price of domestic energy storage project in Australia 2026

Overview

Which energy storage projects have been successful in Australia?

Image: Pacific Green. Six energy storage projects, totalling 3,626MWh of energy, have been successful in the Australian government's Capacity Investment Scheme (CIS) for Victoria and South Australia. The tender allocation will deliver 1,630MWh to Victoria and 1,996MWh to South Australia.

Which energy storage projects have been successful in the CIS tender?

The Limestone Coast Energy Park (rendering shown above) was one of the projects successful in the latest CIS tender. Image: Pacific Green. Six energy storage projects, totalling 3,626MWh of energy, have been successful in the Australian government's Capacity Investment Scheme (CIS) for Victoria and South Australia.

Do energy storage projects rely on government subsidies?

number of global and Australian storage projects have relied on government subsidies (eg. Hornsdale Power Reserve), which is not surprising given the nascent state of the energy storage market. This paper refers only to utility scale energy storage systems.

Can energy storage pumped hydro projects access benefits of a high price event?

For example, an energy storage pumped hydro project cannot access the benefits of a high price event unless it has been charged in previous periods. Therefore, even though the market may be experiencing consecutive high price periods, storage projects may be limited in their ability to dispatch at these times.

Can energy storage projects use arbitrage pricing?

Energy storage projects are able to engage in time-of-day trading strategies; buying low and selling high. To demonstrate the potential of arbitrage pricing,

network is continuously changing, especially with demand management and response, making predicting short run future prices based on historic price trends extremely challenging.

When are energy storage prices high?

Historically, the highest prices have been in the weekday 'shoulder' periods between approximately 7am-8am and 6pm-9pm. This is typically when demand is high. Despite this pattern, demand and supply in the National Energy Market (NEM) Energy storage projects are able to engage in time-of-day trading strategies; buying low and selling high.
