

Technology Handmade Solar Power Generation

Overview

Which solar power technologies can be used for sustainable electric power generation?

In this article, different solar power technologies have been reviewed which can be utilized for the global sustainable electric power generation. Major emphasize has been on solar photovoltaic (PV) and concentrated solar power (CSP) technologies. Their types, mechanism, efficiency and cost factors have been discussed.

What is the progress made in solar power generation by PV technology?

Highlights This paper reviews the progress made in solar power generation by PV technology. Performance of solar PV array is strongly dependent on operating conditions. Manufacturing cost of solar power is still high as compared to conventional power. Abstract.

What is solar power?

Solar power is the conversion of sunlight into electricity, either directly using photovoltaic (PV), or indirectly using concentrated solar power (CSP). The research has been underway since very beginning for the development of an affordable, in-exhaustive and clean solar energy technology for longer term benefits.

What is a solar photovoltaic & wind turbine hybrid generation system?

A solar photovoltaic, wind turbine and fuel cell hybrid generation system is able to supply continuous power to load. In this system, the fuel cell is used to suppress fluctuations of the photovoltaic and wind turbine output power. The photovoltaic and wind turbines are controlled to track the maximum power point at all operating conditions.

What has been done in solar power generation & application?

Substantial progress has been made in the area of solar power generation and

application covering analysis, simulation, and hardware development and testing for efficiency maximization and cost minimization.

What technologies are used in PV energy production?

Conventionally, commercial production of PV energy has been centered around crystalline silicon and thin-film technologies (e.g., Cadmium telluride (CdTe) and Copper Indium Gallium Selenide (CIGS)).
