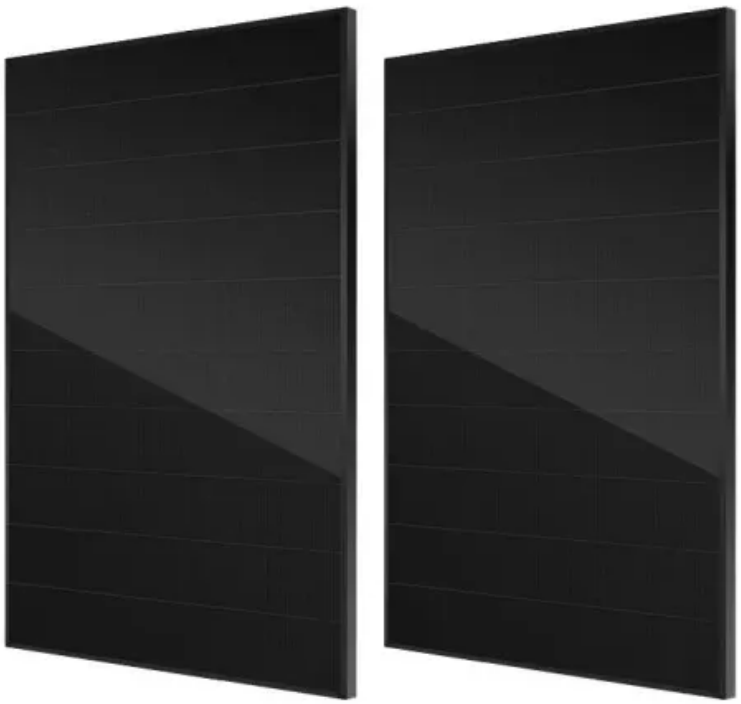
Tesla solar bracket switch



Overview

What is a Tesla backup switch?

The Tesla Backup Switch is a crucial component of a Powerwall system that detects power outages and instantly switches your home to solar + battery power. All backup battery systems need a device like this (often called a “gateway”) to safely disconnect your home from the grid and allow your solar and battery system to stay active.

What is a Tesla Powerwall system?

Learn More A Powerwall system consists of at least one Powerwall, a Tesla Gateway and the electrical hardware required by the home such as a meter, main panel and solar inverter. Powerwall can be wall-mounted or floor-mounted, and both Powerwall and the Gateway have multiple cable entry points for flexible installation.

What breaker do I need to install Tesla Powerwall 3?

If enabling this feature in Tesla One, Powerwall 3 must be installed with an 80 A breaker and appropriately sized conductors. The Expansion units must be connected to the Leader Powerwall 3; they will not function if connected to a Follower. 1 Values provided for 25°C (77°F), at beginning of life. 3.3 kW charge/discharge power.

How long does a Tesla backup switch last?

Tesla Backup Switch is designed for a service life of 21 years and is designed with the same reliability standards and experience accumulated from 500,000+ Powerwalls deployed globally. For more information on operating your system with Backup Switch, see the Owner’s Manual for your system.

Tesla solar bracket switch

[Backup Switch Physical Requirements]
