

# **The fish pond was equipped with photovoltaic panels**

## Overview

---

Can a solar plant atop a fish pond in China?

Concord New Energy, a Chinese company that specializes in wind and solar power project development and operation, has installed a 70 MW solar plant atop a fish pond in an industrial park in Cangzhou, China's Hebei region, according to an initial report from PV Magazine.

Can floating solar panels be used to cover fish ponds?

Numerous studies have developed mathematical models of fish pond ecosystems (Piedrahita et al., 1984; Svirezhev et al., 1984; Wolfe et al., 1986; Li and Yakupitiyage, 2003; Zhang et al., 2017; Granada et al., 2018), but to our knowledge, the ecological effects of covering fish ponds with floating solar panels have not yet been studied.

Does Trina Solar support fish and shrimp aquaculture?

The project, which is situated on a pond, also supports fish and shrimp aquaculture. Trina Solar supplied 670 W solar panels for the installation. China's Concord New Energy has deployed a 70 MW solar plant on a fish pond in an industrial park in Cangzhou, China's Hebei province. The project features Trina Solar's 670W Vertex PV modules.

Can FPV systems be used in aquaculture ponds?

The application of FPV systems on aquaculture ponds (aquavoltaics) would greatly extend the area where the production of renewable energy becomes feasible.

What is aquavoltaics & how does it work?

Aquavoltaics is the practice of installing solar panels around fish farms and other aquaculture sites. The solar panels generate electricity, while the fish continue to be cultivated for food. Taiwan has a particularly ambitious goal of installing 4.4 gigawatts of solar power at its many coastal fish farms by the

end of 2025.

Could solar development help reshape Taiwan's fish ponds?

Taiwan's fishing villages are aging and shrinking as younger people take city jobs. Climate change has also taken a toll. Severe storms damage fishpond embankments, while extreme heat and rainfall stress the fish. Solar development could help reverse these trends.

## The fish pond was equipped with photovoltaic panels
