How does photovoltaic (PV) technology work?

Photovoltaic (PV) materials and devices convert sunlight into electrical energy. What is photovoltaic (PV) technology and how does it work?

PV materials and devices convert sunlight into electrical energy. A single PV device is known as a cell. An individual PV cell is usually small, typically producing about 1 or 2 watts of power.

What is a photovoltaic (PV) cell?

A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Some PV cells can convert artificial light into electricity. Sunlight is composed of photons, or particles of solar energy.

What is photovoltaic technology?

Photovoltaic technology, often abbreviated as PV, represents a revolutionary method of harnessing solar energy and converting it into electricity. At its core, PV relies on the principle of the photovoltaic effect, where certain materials generate an electric current when exposed to sunlight.

How do solar panels work?

You probably already know that solar panels use the sun's energy to generate clean, usable electricity. But have you ever wondered how they do it?

At a high level, solar panels are made up of solar cells, which absorb sunlight. They use this sunlight to create direct current (DC) electricity through a process called "the photovoltaic effect."

What is a photovoltaic effect?

Becquerel, while investigating the behavior of different materials when

exposed to light, noted that certain materials generated an electric current when illuminated. This phenomenon, known as the photovoltaic effect, was the key to unlocking the potential of solar energy for electricity generation.

What are the key principles underlying PV technology?

This chapter provides a comprehensive overview of the key principles underlying PV technology, exploring the fundamental concepts of solar radiation, semiconductor physics, and the intricate mechanisms that facilitate the transformation of sunlight into a usable electrical power source.
