

The role of solar energy storage liquid

Overview

Can solar energy be stored in a chemical liquid?

Researchers at Chalmers University of Technology in Sweden have demonstrated efficient solar energy storage in a chemical liquid. The stored energy can be transported and then released as heat whenever needed. The research is now presented on the cover of the scientific journal *Energy & Environmental Science*.

How is solar energy stored?

The liquid chemical makes it possible to store and transport the stored solar energy and release it on demand, with full recovery of the storage medium. The process is based on the organic compound norbornadiene that upon exposure to light converts into quadricyclane.

Why do solar cells need a lithium-ion battery?

Although solar cells contribute significantly to renewable energy production, they face challenges related to periodicity and energy storage. The lithium-ion battery complements solar cells by storing excess energy generated during periods of sunshine, providing a steady and reliable supply of electricity.

Can a chemical fluid convert solar energy into energy?

A research team from Chalmers University of Technology in Gothenburg, Sweden, has shown that it is possible to convert the solar energy directly into energy stored in the bonds of a chemical fluid – a so-called molecular solar thermal system.

Why is energy storage important?

Renewable energy sources such as wind and solar are intermittent. They have a highly variable output, which means they can produce surplus energy, which can overload the system, and they can also produce less energy than that required. The energy storage system is regarded as the most effective

method for overcoming these intermittents.

Why is solar thermal energy storage important?

For regions with an abundance of solar energy, solar thermal energy storage technology offers tremendous potential for ensuring energy security, minimizing carbon footprints, and reaching sustainable development goals. Global energy demand soared because of the economy's recovery from the COVID-19 pandemic.
