Overview

How are solar panels installed?

The installation phase involves the actual installation of solar panels. Once the installation and design have been approved, an expert will schedule a time to install the solar panels. The first step involves installing the mounting brackets onto your roof. The brackets are used to mount the solar panels and secure them in place.

How does a solar panel installation work?

The installers start by setting up mounts, ensuring that the solar panel remains securely fastened to the roof and protects it from potential damage in bad weather. This is done by lifting some roof tiles in order to fix anchor points to the rafters. To these roof anchor points are attached the solar panel mounting system.

How do commercial solar panels work?

The actual process of installing commercial solar panels is similar to residential installations. The mounting brackets are installed on the roof, and the solar panels are then placed onto the mounting system. However, commercial installations may require larger and heavier equipment to handle large panels.
