

# **Thickness of silicone resin in photovoltaic panels**

## Overview

---

An optimum silicon solar cell with light trapping and very good surface passivation is about 100  $\mu\text{m}$  thick. Why do PV panels need a resin coating?

The addition of the resin allows the various nanoparticles to cross-link and bond together, allowing the coating to remain durable in a variety of harsh environments. This functional coating allows PV panels to be self-cleaning while optimizing performance.

Can transparent epoxy coatings be used on photovoltaic modules?

Roppolo et al. [ 18] also presented transparent epoxy coatings, which can be used as coatings on photovoltaic modules due to the uncomplicated, low-cost, and easily scalable manufacturing method. The modification of these coatings involved the addition of a mica-based mineral filler.

Can transparent coatings be used in photovoltaic panels?

A slight reduction in transmittance in the mid-IR region was observed. Thus, investigated coatings have the potential for use in photovoltaic panels. In conclusion, the applied chemical modification allowed to obtain transparent coatings with enhanced anti-icing properties.

Can polysiloxanes be used in photovoltaic panels?

**Conclusions** The silicone-epoxy coatings produced in the entire tested spectral range showed similar optical properties (T, R, A) to those of glass. They can be potentially used in photovoltaic panels. The chemical modification with polysiloxanes resulted in an increase in surface roughness compared to the unmodified coating.

Can silicone encapsulants be used for photovoltaic modules?

These properties make them ideal candidates as encapsulants for photovoltaic modules. Internal evaluations at Dow Corning and with select external partners have shown that very efficient solar cells using silicones as the

encapsulant can be assembled and show very good reliability.

How to improve UV cut-off for PV encapsulant materials?

Regarding the encapsulant materials, improving the UV cut-off to below 350 nm for PV encapsulant materials is desirable, and this could be obtained by using specific additives to ensure the cut-off effects.
