Overview

How to install PV modules?

Always use all the eight mounting holes to secure the modules. The module frame must be attached to a mounting rail using M8 corrosion-proof bolts together with spring washers and flat washers in eight symmetrical locations on the PV module. The applied torque value should be big enough to fix the modules steadily.

Should solar PV modules be tilted?

For grid-connected installations where the PV modules are attached to a permanent structure, PV modules should be tilted so that the energy production from the PV modules will be maximized on an annual basis. Solar PV modules usually can be mounted by using the following methods: bolts and clamps.

Where should Jinko Solar PV modules be installed?

In most applications, Jinko solar PV modules should be installed in a location where they will receive maximum sunlight throughout the year. In the Northern Hemisphere, the module should typically face south, and in the Southern Hemisphere, the modules should typically face north.

Can a PV module be connected in series?

This is prohibited and there is a risk of damage to the module and cause injury for you. Only PV modules with the same cell size should be connected in series. During transporting modules, please attempt to minimize shock or vibration to the module, as this may damage the module or lead to cell micro cracks.

How high can a PV module be installed?

Others: • The maximum altitude of module installation is 2000m. • The minimum distance from the seashore is 50m (for more info, please refer to

2.2.2). • When looking at PV modules with anti-reflection (AR) coating technology, it will be normal to see module with a slight color difference at different angles.

What should you not do when installing a PV module?

Do not touch the junction box and the end of the interconnect cables (connectors) with bare hands during installation or under sunlight, regardless if the PV module is connected to or disconnected from the system. Do not expose the PV module to excessive loads on the surface of the PV module or twist the frame.
