

Travelscoot lithium battery

Overview

The 3-pound 151Wh lithium-ion battery is designed for the TravelScoot™ Shopper, but can be used as the primary or back-up battery in all other TravelScoot™ models. This battery.

Light-weight (5.5 lbs) lithium-ion battery with a range of up to 20 miles (35 km) (200-lb (90 kg) rider on flat, paved ground). This battery is not approved for air travel since its capacity.

Light-weight (4 lbs), air-travel-approved lithium-ion battery; Included with the TravelScoot Deluxe. Difference between full-size and junior battery:

What are travelscoot lithium-ion batteries made of?

TravelScoot lithium-ion batteries are made of 100% Panasonic cells, housed in either a Sabic C6600 or Aluminium casing. Our airline-approved batteries feature a UL 94-5VB flame rating, are high impact resistant, and bromine and chlorine-free.

What kind of battery does a travelscoot™ shopper use?

The 3-pound 151Wh lithium-ion battery is designed for the TravelScoot™ Shopper, but can be used as the primary or back-up battery in all other TravelScoot™ models. This battery also complies with the stricter, 160Wh capacity limit imposed by some airlines in deviation for IATA rules. Range: 8 miles or 13 km.

Are travelscoot batteries safe?

Our airline-approved batteries feature a UL 94-5VB flame rating, are high impact resistant, and bromine and chlorine-free. When you buy a TravelScoot, you can rest assured that you are buying one of the safest batteries money can buy.

How much does a travelscoot™ battery weigh?

The ranges were established with a 100 kg (220-lb) load on level pavement.

The range may vary depending on rider weight, surface and grade (upward or downward slope). The 3-pound 151Wh lithium-ion battery is designed for the TravelScoot™ Shopper, but can be used as the primary or back-up battery in all other TravelScoot™ models.

How many watts a battery can a mobility scooter use?

Mobility Aids: Folding mobility scooters using lithium-ion batteries: The lithium-ion battery must be removed from the scooter and transported in the cabin. These batteries shall not exceed 300 Watt-hours (Wh) in capacity if the mobility device is equipped with one battery. If the device uses two batteries, they shall not exceed 160 Wh each.

How many lithium ion batteries can be transported?

For devices using two lithium-ion batteries, their individual capacity cannot exceed 160 Wh each. One additional (spare) battery not exceeding 300 Wh, or two additional (spare) batteries not exceeding 160 Wh each, may be transported in the cabin, and must be placed in a manufacture-sourced battery pouch.
