

Truth about solar energy

Overview

What are some common myths about solar energy?

Three common myths about solar energy are: Myth: Solar power is expensive. Reality: The cost of solar has fallen dramatically. Let's explore these misconceptions.

Are solar myths rooted in distrust of solar energy?

Not every solar myth is rooted in distrust of solar energy. The notion that simply throwing solar at our energy problems will solve them overlooks challenges around commercial-scale storage, access, and recycling.

Does solar work if it's raining?

Here are some common myths and misconceptions: Myth #1: Solar only works when the sun is shining. I still need power when it's raining. Actually, solar technology can be leveraged in virtually any condition, including rainy and snowy days, because some sunlight still reaches the earth.

Is solar power better for the climate?

Yes. Solar power is better for the climate because solar panels produce energy by tapping into a free, clean and abundant resource — sunshine.

Is it beneficial to install solar panels?

Going solar is likely to help lower energy bills and can even increase your home's value. The Center for Sustainable Energy estimates that most homeowners who install solar panels will earn their money back in six to nine years. However, rooftop solar may not be the best solution in every scenario.

Can solar power solve all our energy problems?

Myth: Solar power is the perfect solution to all our energy problems. Reality: We'll need to implement a range of solutions, including but not limited to

solar.
