

# **Tsinghua Sunshine Solar Power Plant**

## Overview

---

Where is China's largest molten salt solar power plant located?

China's largest molten salt solar thermal power plant is situated in Dunhuang, northwest China's Gansu Province. By receiving sunlight and heating up the molten salt, it can constantly generate electricity. The power station generates 390 million kilowatts of electricity per year, reducing carbon dioxide emissions by 350,000 tonnes.

Will large-scale PV deployment contribute to China's net-zero electricity system by 2050?

The contribution of large-scale PV deployment to China's net-zero electricity system by 2050. As China has pledged to become carbon neutral by 2060, electrifying its energy sector is no doubt one of the priority measures to support the transition towards a more sustainable and decarbonized energy system.

What is the capacity potential for large-scale solar PV in China?

4. Discussion This work reports that the total capacity potential for large-scale PV in China is 108.22 TW with 150.73 PWh annual solar PV generation (implying an average capacity factor of 15.9), which can bring 150.28 billion tones of CO<sub>2</sub> emission mitigation caused by coal-fired power generation.

What is the first solar power demonstration project in China?

In May 2009, the experimental solar thermal power plant in Yanqing county was approved, which is the first solar thermal power demonstration project in China, remarking that Beijing obtained a new breakthrough in the field of solar energy utilization.

How solar energy utilization is improving in Beijing?

Taking a group of solar energy utilization projects such as “Sunshine Double Hundred” and “Golden Sun” Program as a breakthrough point, the utilization

scale and technology level of Beijing's solar energy have been significantly improved.

How many GW of solar power will China have in 2021?

By the end of 2021, the installed capacity of the PV systems nationwide reached 306 GW, ranking first in the world for six consecutive years since 2015. Moreover, China plans 3550 GW of installed PV capacity by 2060, accounting for 45% of the total power generation in China [ 4 ].

## Tsinghua Sunshine Solar Power Plant

---

### Design Optimization and Operating Performance of S-CO<sub>2</sub>

The supercritical CO<sub>2</sub> (S-CO<sub>2</sub>) Brayton cycle is expected to replace steam cycle in the application of solar power tower system due to the attractive potential to improve ...
