

# Tutorial on installing steel frame of photovoltaic panels in the wild

- ☑ High energy density and long cycle life
- ☑ Modular structure

No need to replace the battery

Shorter charging time

Meets 99% EV car

## Overview

---

How to install solar panels on a roof?

The foremost requirement is the structural strength of the roof, which should be capable of supporting the additional weight of the solar panels and the mounting structure. The solar panel mounting structure is usually made of mild steel or aluminum, which adds minimal weight but provides adequate support to the panels 1.

How do I choose a solar panel structure?

The structure must be compatible with the solar panels and other components of the system, such as inverters and mounting hardware. Ensure the structure is designed to accommodate the specific requirements of your solar panels, including their size, weight, and electrical connections.

Are steel structures good for solar panels?

From durability and cost-effectiveness to flexibility and environmental sustainability, steel structures provide a solid foundation for your solar panels. Useful Links: [Solar Panel Price in Pakistan: A Comprehensive Guide for 2024](#) Find the Perfect Solar Mounting Structure: [Guide for Rooftops, Ground & Carports](#).

How to install solar panels?

Instead just a simple steel pole with a concrete anchor is placed on the ground. This simple structure provides in general sufficient support to solar panels. In some cases, due to the unsuitable soil type or extreme weather conditions, special adjustments are required. Among the available pole mounted schemes, you will often find Side Pole Mounts.

Do you need a solar panel structure?

Solar Panel Structure: Solar energy is a clean, renewable resource that can significantly reduce your reliance on fossil fuels and lower your electricity bills.

However, to capture the sun's energy and convert it into usable electricity, you'll need a solar mounting structure.

What is a solar panel mounting structure?

The solar panel mounting structure is usually made of mild steel or aluminum, which adds minimal weight but provides adequate support to the panels 1. The design of the rooftop installation should also account for the shading from adjacent buildings or objects.
