What is solar energy?

Solar energy is the radiation from the Sun capable of producing heat, causing chemical reactions, or generating electricity. The total amount of solar energy received on Earth is vastly more than the world's current and anticipated energy requirements. If suitably harnessed, solar energy has the potential to satisfy all future energy needs.

What is solar energy used for?

Sun's energy is a type of clean energy that, in recent years, has been extensively promoted to reduce fossil fuel consumption. The uses of solar energy can be divided into two large groups: photovoltaic solar energy and thermal. Photovoltaic energy is used exclusively to generate electricity.

Can solar energy be used as a thermal energy source?

Solar energy has long been used directly as a source of thermal energy. Beginning in the 20th century, technological advances have increased the number of uses and applications of the Sun's thermal energy and opened the doors for the generation of solar power.
