

User manual solar inverter

Overview

How to wire a solar inverter?

Connect the AC output power cable according to the requirements specified by local power grid operators. Connect the power cable of the tracking system before the AC output power cable. Otherwise, reworking will be caused. Do not connect loads between the solar inverter and the AC switch. If a copper cable is used, use copper wiring terminals.

What is a PV inverter manual?

The inverter is grid-connected, transformer-less, robust and of high conversion efficiency. This manual contains information about the inverter, which will provide guidelines on connecting the inverter into the PV power system and how to operate the inverter. The manual cannot include all information about the PV system.

How do I choose a solar inverter cable?

Select cables in accordance with local cable specifications (green-and-yellow cables are only used for protective earthing). SUN2000 solar inverters support RS485 communication and MBUS communication.

What information is included in the inverter manual?

This manual contains information about the inverter, which will provide guidelines on connecting the inverter into the PV power system and how to operate the inverter. The manual cannot include all information about the PV system. You may get additional information at .

How does a solar inverter communicate with the management system?

The solar inverter communicates with the management system through the SDongle. The solar inverter has an RCMU inside. Its external AC switch should be a three-phase circuit breaker or other AC load circuit breakers to safely disconnect the solar inverter from the power grid.

How do I connect my inverter?

Connect the cable through the corresponding interfaces on the bottom of the inverter during power cable and communication cable connection; Tie the communication cables (e.g. RS485 and the dry contact) to prevent interference with the power cables. *On site, wire conduit can be used as a substitute for the gland.
