

Various solar power generation equipment

Overview

The solar power plant is also known as the Photovoltaic (PV) power plant. It is a large-scale PV plant designed to produce bulk electrical power from solar radiation. The solar power plant uses solar energy to produce electrical power. Therefore, it is a conventional power plant. Solar energy can be used directly to produce.

The major components of the solar photovoltaic system are listed below. 1. Photovoltaic (PV) panel 2. Inverter 3. Energy storage devices 4.

A solar cell is nothing but a PN junction. The plot of short-circuit current (ISC) and open-circuit voltage (VOC) describes the performance of the solar.

The solar panels are classified into three major types; 1. Monocrystalline Solar Panels 2. Polycrystalline Solar Panels 3. Thin-film Solar Panels.

The solar power plant is classified into two types according to the way load is connected. 1. Standalone system 2. Grid-connected system
