

# **Vertical installation of solar power generation**

## Overview

---

Can bifacial photovoltaic panels be installed vertically?

The vertical installation exhibited a ~ 1678 kWh/kWp performance ratio, retaining ~82% of the tilted installation energy yield. The results underscore the feasibility and advantages of employing vertically installed bifacial photovoltaic panels in residential settings, particularly in limited areas.

What is a vertical bifacial photovoltaic system?

Vertical bifacial photovoltaic (PV) systems are gaining interest as they can enable deployment of PV in locations with grid or area limitations. Over Easy Solar has developed a lightweight design for vertical bifacial systems for flat roofs employing small modules with the height of one cell.

Can a vertical solar PV system be installed in an apartment?

Vertical installation is an attractive solution for deploying solar PV systems in apartments with limited space. However, in some jurisdictions, regulations may restrict such installations due to aesthetic considerations, particularly in urban areas.

What is the Over Easy solar vertical bifacial PV unit?

The Over Easy Solar vertical bifacial PV unit (VPV Unit) consists of a support structure and a specially designed module with the height of one cell, as shown in Figure 1. The aim of this design is to make an easily installed, lightweight (the system is ballast free), vertical bifacial system for flat roofs.

How reflected irradiation enhance the power generation of vertical PV system?

The power generation of the vertical PV system was remarkably enhanced by utilizing the reflected irradiation from the mirrors. The major conclusions of this study are as follows: The bifacial PV modules were mounted vertically, and reflecting mirrors were placed at optimum tilt angles to enhance power.

How does vertically oriented PV deployment affect the cost of power systems?

Furthermore, it is noteworthy that the rising proportion of vertically oriented PV deployment results in a decrease in the total cost of the power system: In the 2040 Reference PV scenario, there is a decrease of 3 billion Euros when increasing the vertical module share to 50%.
