## Overview

---

Planets – Five planets in our solar system are easily observed without a telescope: Mercury, Venus, Mars, Jupiter and Saturn. Uranus is just barely visible for those with excellent eyesight under dark-sky conditions, provided you know where to look. Which planets are currently visible?

See which planets are currently visible, along with their rise and set times, to help you plan your observations. Jupiter presents a captivating view with its prominent cloud bands, the iconic Great Red Spot, and up to four of its largest moons: Io, Europa, Ganymede, and Callisto.

Which planets are visible at night?

Saturn's visible all night. Jupiter and Mars rise in the couple of hours after midnight and are visible in the southeast before sunrise. September 1-7 – If you're in the Northern Hemisphere, you can spot Mercury this week during morning twilight if you can find an unobstructed view toward the east. It appears low in the east just before dawn.

Where can I find a detailed view of a planet?

See the indispensable Observer's Handbook, from the Royal Astronomical Society of Canada. Visit [Stellarium-Web.org](http://Stellarium-Web.org) for precise views from your location. Almanac: Bright visible planets (rise and set times for your location). Visit [TheSkyLive](http://TheSkyLive) for precise views from your location.

What can you see on a night sky map?

The map includes the Moon, stars brighter than magnitude 5, the five bright planets (Mercury, Venus, Mars, Jupiter, and Saturn), and deep-sky objects that can be seen without the use of optical aid. How Do I Use the Interactive Sky Chart to Explore the Night Sky?

Learn sky chart basics in our short tutorial:.

What to look for in our night sky?

Here's what to look for in our current night sky. (Courtesy NASA/JPL-Caltech) A partial lunar eclipse makes the full supermoon on Sept. 17th extra super. Also, chances to observe five planets this month, and a global night for observing. All month - Venus sits low in the west following sunset. Saturn's visible all night.

How do I explore the celestial landscape?

Interactively explore the celestial landscape by panning horizontally to see how the arrangement of planets changes throughout the night. Discover the planets that are currently visible in the night sky.
