

# **Volkswagen New Energy Storage**

## Overview

---

When will Volkswagen's energy storage system be connected to the grid?

According to Volkswagen, the facility should be connected to the grid by early 2025. To make this worthwhile for the charging network division, the energy storage systems will also be used for arbitrage transactions on the electricity trading market. An initial capacity of 700 MWh is planned, which can be expanded to one gigawatt hour.

Does Volkswagen have a power center?

This article was originally published in German and has been automatically translated. Volkswagen announces a new business model with its battery storage systems to stabilize the power grid. Next year, the charging power division "Elli" will go online with its first so-called "Power Center".

What is Volkswagen's technology roadmap for batteries and charging up to 2030?

Wolfsburg. The Volkswagen Group presented its technology roadmap for batteries and charging up to 2030 today on its first Power Day. The goal of the roadmap is to significantly reduce the complexity and cost of the battery in order to make the electric car attractive and viable for as many people as possible.

Why does Volkswagen want a long-term supply of cells for E-offensive?

Together with selected strategic partners, Volkswagen therefore wants to secure the long-term supply of cells for its e-offensive. Advances in storage capacity and fast-charging capability are expected in addition to cost benefits.

What is Volkswagen doing with the battery system?

Volkswagen is striving to make significant advances with the battery system including all of its components right through to the cell. "We aim to reduce the

cost and complexity of the battery and at the same time increase its range and performance”, says Thomas Schmall, Volkswagen Group Board Member for Technology.

Will Volkswagen be able to supply battery cells beyond 2025?

At the same time, the Group is aiming to secure the supply of battery cells beyond 2025. In Europe alone, six gigafactories with a total production capacity of 240 GWh are to be established by the end of the decade. Volkswagen is also vigorously pursuing expansion of the public fast-charging network globally.
