

Water battery converted to solar panels

Overview

The solar water battery integrates a photoelectrochemical cell and battery into a single device. It uses a water oxidation reaction to simultaneously convert and store solar energy. How does a solar water battery work?

The solar water battery integrates a photoelectrochemical cell and battery into a single device. It uses a water oxidation reaction to simultaneously convert and store solar energy. With the solar water battery, light striking the photoelectrode causes the water to be photo-oxidized, thus charging the battery.

How does a solar PV system work?

If and when the sensor detects that your Solar PV System is exporting energy to the Grid, the device diverts this flow of energy. Diverting your Solar Energy to power the immersion heater in your hot water tank instead. This effectively heats your water cylinder for free, off of energy from the sun.

Does a solar power diverter work with a battery?

Some solar power diverters like the eddi, and iboost have the ability to be compatible with solar batteries. In this case, your Solar PV System will always prioritise charging your battery first. However, if there is any surplus energy left after charging your battery, it will then divert this energy into heating your hot water.

What is a solar water battery?

The solar water battery consists of a TiO_2 (P25, Degussa) photoelectrode (PE), a WO_3 (Aldrich) storage electrode (SE), a platinum (Aldrich) counter electrode (CE), and a lithium-ion-conducting glass ceramic (LICGC, 0.18-mm, $\text{Li}_{1+x+y}\text{Al}_x\text{Ti}_{2-x}\text{Si}_y\text{P}_{3-y}\text{O}_{12}$ (OHARA Inc., Japan)) membrane.

How do solar thermal panels work?

Solar thermal panels use fluid-filled solar collectors (filled with a mixture of

glycol and water) to collect infra-red energy from the sun. The solar energy is converted into heat, and the heated fluid is pumped via a circuit through the hot water cylinder to heat the water.

Should you use home batteries to store solar energy?

If you have solar PV panels, or are planning to install them, then using home batteries to store electricity you've generated will help you to maximise the amount of renewable energy you use. Storing your solar energy will reduce how much electricity you use from the grid, and cut your energy bills.
