

# What is the name of the hoist for a whole box of photovoltaic panels

## Overview

---

What is a solar lift?

The Solarlift, also called a panel lift or PV panel lift, is an economical solution for the speedy and safe transport of photovoltaic and solar panels. Specially designed with a custom carrier that functions as a cargo receptacle, GEDA's solar panel lift is a time-saving space-saving way to reach inaccessible loading areas.

What is a solarlift & how does it work?

Solarlift is a reliable device on every construction site to transport and assemble solar panels and photovoltaic systems securely. The Solarlift also comes with an extra post that supports the ladder segments for heavy loads. The German-engineered device convinces with an amazing set-up time of only 18 minutes.

What is a vertical solar panel platform?

Vertical Solar Panel Platform This selection allows for solar panels to be placed on the platform in portrait orientation. This configuration provides the added ability to keep panels separated which can reduce stress/pressure on panels squeezed together.

How does a PV module work?

The device uses your existing fiberglass Werner or Louisville extension ladder. A pulley system is attached to the top of the ladder. A patented module "hook" attaches to the edge of a PV module frame and prevents lateral sliding of the module in the hook. An operator pulls the rope to raise the module.
