

What to do if photovoltaic panels are prone to water accumulation

Overview

The panels are typically installed at an angle so that water can easily slide off, reducing the chance of water accumulation and subsequent damage. Another protective measure is regular maintenance. Can a waterless cleaning method remove dust from solar panels?

Dust that accumulates on solar panels is a major problem, but washing the panels uses huge amounts of water. MIT engineers have now developed a waterless cleaning method to remove dust on solar installations in water-limited regions, improving overall efficiency. Image courtesy of the researchers.

How to clean a PV panel?

Using a certain amount of tap water is difficult to remove fine particles. Long-term cleaning will cause a certain degree of wear on glass surfaces. Another method was to use high-pressure water to clean the surface of the PV panel .

How to clean a solar PV system?

A review of solar PV cleaning methods was made in Saravanan and Darvekar, 2018, Patil et al., 2017b. Different cleaning methods such as electrostatic cleaning, super hyperbolic coating, mechanical, microcontroller-based automatic cleaning, self-cleaning nanodomies, and various characteristics of dust particles were discussed.

How to prevent dust from accumulating on photovoltaic modules?

The best materials for preventing dust from accumulating on photovoltaic include waterproof coatings, hydrophobic coatings, and anti-static coatings. These materials work to either repel dust away from the solar modules or create a barrier that traps dust before it can reach the modules.

How to clean a solar panel with a sprinkler system?

The principle concept here is to eject water from a mini sprinkler, then use the

spiral brush to clean the panel and finally use a rubber sweeper to remove the dirty water. This system can be implemented for (1) solar farms, (2) solar rooftop, and (3) floating solar panels.

Can water based cleaning improve the efficiency of PV panels?

The article in Katakam et al. (2019) proposes a water based cleaning technique for PV panels. The cleaning is achieved by the water being sprayed from the top of the panel through closely placed nozzles only. An increase in efficiency by 1.2%–3% was achieved.
