

# What to do if solar photovoltaic power generation does not work

## Overview

---

Why are my solar panels not generating electricity?

The inverter is the heart and soul of any solar panel system. It works as a power adapter that allows your battery-powered system to run everyday appliances through your home's power grid. So, if the panels aren't generating electricity, your inverter is probably the one to blame.

What should I do if I don't have solar system monitoring?

If you do not have solar system monitoring installed, the first step is to check for any obvious issues with the solar panels, such as a build-up of dirt, dust, mould, or leaves. Maybe a good wash with a soft broom and water is all that they need. Also, check no nearby trees have grown significantly and are shading the panels.

What should I do if my solar inverter goes off?

If it trips back to the off position, leave it off and call an engineer. Also check your inverter for any fault codes or error messages. Check the real-time and cumulative generation on your inverter (most have these options) to make sure that the solar panels are still generating electricity.

What happens if I don't use my solar panels during the day?

As you probably already know, any excess energy that your solar panel system doesn't use during the day is then exported from your grid to the power network. However, even if you are outside during daytime and don't use any of the generated solar energy, you may still be met by the same monthly bill since you were offered a lower feed-in tariff.

Can a cracked solar panel still be generating electricity?

The cracked panel may still be generating electricity but Ben Robinson, director of Exeo Energy, advises getting it replaced as soon as possible: "This will eventually result in issues, normally as soon as moisture enters the

panel". See if you can get a replacement panel under warranty. If so, Mr Robinson advises that:

Are your solar panels defective?

One of the solar panels is defective. Even though solar panels are incredibly durable products with a life expectancy of at least 25 years, a few faulty panels do manage to slip through the QA experts working at bigger factories.
