

## Overview

---

In 2023, solar power generated 5.5% (1,631 TWh) of global electricity and over 1% of primary energy, adding twice as much new electricity as coal. [65] [66] Along with onshore wind power, utility-scale solar is the source with the cheapest levelised cost of electricity for new installations in most countries.

Solar energy is and from the that is harnessed using a range of technologies such as to generate , (including ), and .

Solar thermal technologies can be used for water heating, space heating, space cooling and process heat generation. Early commercial adaptationIn 1878, at the Universal Exposition in Paris, successfully demonstrated a solar.

Sunlight has influenced building design since the beginning of architectural history. Advanced solar architecture and urban planning methods were first employed by the and , who oriented their buildings toward the south to provide light and warmth. .

Development of a solar-powered car has been an engineering goal since the 1980s. The is a biannual solar-powered car race, where teams from universities and enterprises compete over 3,021 kilometres (1,877 mi) across central Australia from .

The Earth receives 174 (PW) of incoming solar radiation ( ) at the upper . Approximately 30% is reflected back to space while the rest, 122 PW, is absorbed by clouds, oceans and land masses. The of solar light at the Earth's surface is.

Concentrating Solar Power (CSP) systems use lenses or mirrors and tracking systems to focus a large area of sunlight into a small beam. The concentrated heat is then used as a heat source for a conventional power plant. A wide range of concentrating.

and seek to optimize the capture of solar energy to optimize the productivity of plants. Techniques such as timed planting cycles, tailored row orientation, staggered heights between rows and the mixing of plant varieties can improve crop yields.

The typical cost factors for solar power include the costs of the modules, the frame to hold them, wiring, inverters, labour cost, any land that might be

required, the grid connection, maintenance and the solar insolation that location will receive. Photovoltaic systems use no fuel, and modules typically last 25 to 40 years. T.
