

When the wind turbine starts generating electricity

Overview

Wind turbines are the modern version of a windmill. Put simply, they use the power of the wind to create electricity. Large wind turbines are the most visible, but you can also buy a small wind turbine for individual use; for example to provide power to a caravan or boat.

Wind farms are groups of wind turbines. It's pretty impressive to think that the electricity that powers so much in our lives - from charging our phones, to allowing us to make a cup of coffee or.

First let's start with the visible parts of the wind farm that we're all used to seeing - those towering white or pale grey turbines. Each of these turbines.

Wind turbines do tend to be either white or very pale grey - the idea being to make them as visually unobtrusive as possible. There is discussion about whether they should be painted other.

To connect to the national grid, the electrical energy is then passed through a transformer on the site that increases the voltage to that used by the national electricity system. It's at.
