NOTE Consult and follow local codes and other applicable laws concerning required permitting as well as installation & inspection requirements, rules, and regulations. Modules and.

PV modules can produce DC current under illumination, any contact of the exposed metal of the modules connection wires may result in electrical shock or burn. Any contact of 30V.

This equipment has been tested and found to comply with the limits applied by the local regulations. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

NOTE Wear protective headgear, insulating gloves, safety shoes, and insulated tools when installing the modules. Do not install the modules in the rain, snow, or otherwise.

Can a water-draining device be clipped to solar panels?

Portuguese startup Solarud has unveiled a water-draining device that can be clipped to solar modules, in order to resolve dust and soiling issues. “The piece is usable on panels that have frame heights of 40 mm, 35 mm or 30 mm, and thickness between 8 mm and 11 mm.

Do PV modules need to be connected to ground?

PV module installation site is exposed to long-term humid conditions such as floating PV system. To reduce the risk of PID, on the modules DC connection site, it is recommended to connect the negative to ground. As part of the module design, an anodized corrosion-resistant aluminum alloy frame is used to provide rigidity.

How do I mount a PV module to a substructure?

MOUNTING INSTRUCTIONS PV modules can be mounted to the substructure

using either corrosion-proof M8 bolts placed through the mounting holes on the rear of the module or specially designed module clamps. A clearance of at least 115mm (recommended) is provided between modules frame and the surface of the wall or roof.

How do solar panels work?

Solar panels act as a way to mount a series of solar cells so that their unique properties can be used to generate electricity. Individual cells absorb photons from the Sun, which results in the production of an electric current in the cell through a phenomenon known as the photovoltaic effect.

How should a solar PV system be installed?

Modules and PV systems should be installed by authorized and qualified personnel. Follow all safety precautions of all components used in the system. Long periods of shading on the module's surface from the sun can result in cell power dissipation and overheating. Do not clean the glass surface with chemicals.

Does the mounting method block the module drainage holes?

The mounting method does not block the module drainage holes. Panels are not subjected to wind or snow loads exceeding the maximum permissible loads, and are not subject to excessive forces due to the thermal expansion of the support structures. Note: The drain holes cannot be blocked in any situation during installation or use.
