

Whether the wind resistance is on or off after the generator sounds

Overview

How to reduce noise output from a wind turbine?

The most promising single feature to reduce the noise output from a wind turbine is serrated trailing edges (STE) . Most of the noise from a wind turbine is trailing edge noise and can be reduced to by adding STE's on the blades serrated trailing edges.

What are the characteristics of wind turbine noise?

AM due to trailing edge noise directivity The most important feature of wind turbine noise is trailing edge noise. It has a cardioid directivity pattern characterized by a highest noise emission direction pointing toward the leading edge of the aerofoil/blade .

Why does a wind turbine sound like a swoosh?

Subjectively, people describe noise from a wind turbine as a 'swoosh', similar to the sound of waves on the seashore. The precise frequency content of the noise at any particular location is influenced by factors such as the wind turbine model, wind speed, the listener's distance from the turbine (s), and the surrounding terrain.

Should wind turbine noise be revisited?

The research indicates that these should be revisited in view of advancements in onshore wind turbine technology, knowledge and scientific evidence of the potential impact of wind turbine noise, and the evolution of government noise policies in each of the devolved administrations of the UK.

Why do wind turbines have noise limits?

Noise limits are applied to ensure that turbines are located sufficiently far from houses or other noise-sensitive premises to protect the amenity of the location in question. This is a key factor in the design of a wind farm and where turbines can be located. What are the noise limits for wind turbines?

How reliable is wind turbine noise data?

Noise from wind turbines is often a decisive parameter when introducing a wind turbine project and noise data must be reliable. The IEC 61400-11 measurement methods for wind turbine noise emission are the most recognized methods and provide data for siting as well as.
