

# Who invests in building wind turbines

## Overview

---

What are the different types of wind energy investments?

Wind energy falls within two major categories: utility-scale wind and distributed wind. Utility-scale wind energy is the focus of most investors. Investments can span from wind-farm operators, utility companies, ETFs, green bonds, manufacturers of turbines, towers, electronic controls, and other integral components.

Which countries are investing in wind energy?

Germany and France also saw significant investments in both onshore and offshore wind farms. It was another record year for corporate renewable PPAs in Europe with almost 7 GW of capacity contracted in 97 deals. Wind energy represents 2/3rds of the total 18.8 GW of contracted capacity.

Are wind energy projects a good investment?

In the EU, 19 GW of new projects were financed, well below the required rate of 32 GW per year to meet the current 40% renewable energy targets. Wind energy projects make an attractive investment and in the long-term there should be plenty of capital available to finance them but issues with permitting must be resolved to prevent delays.

How much money has been invested in wind farms?

€41.4bn was invested for the construction of new wind farms. Over the next few years, these investments will result in 24.6 GW of new wind farm capacity being connected to the grid. Onshore wind investment was similar in monetary terms to the record €25bn seen in 2016.

Which countries invested the most in wind farms in 2021?

The UK invested the most in new wind farms in 2021, with the final investment decisions taken on Sofia (1.4 GW) and Dogger Bank C (1.2 GW) offshore wind farms raising €8.8bn of capital. Germany and France also saw significant

investments in both onshore and offshore wind farms.

How will the UK's new wind turbine development funding work?

The funding will help expand and upgrade its testing facilities and enable the evolution of the next generation of wind turbines in the UK. The late-stage research and development facilities will be designed for the testing of blades up to 150 metres and drive trains up to 23 megawatts (MW).

## Who invests in building wind turbines

---

### ABB invests in strategic partnership with clean energy ...

ABB invests in strategic partnership with clean energy start-up to offer end-to-end wind energy portfolio It will allow the company to continuously improve wind turbines' performance and reliability, offer end-to-end solutions ...

### Investing in wind energy stocks - a growing industry

In 2021, Vestas' wind turbines supplied wind power to more than 86 countries. It was also the first company in the world to install plants with a total output of 100 GW . In perfect conditions, this ...

### How a Wind Turbine works

How a Wind Turbine works. How Does a Wind Turbine Work? Wind turbines work on a very simple principle: the wind turns the blades, which causes the axis to rotate, which is attached to a generator, which produces ...
