

Wholesale price of photovoltaic solar power generation

Overview

The weighted average wholesale price for solar PV-generated electricity was \$83 per megawatt-hour (MWh) in 2019, more than double the price paid to producers for electricity generated by wind, fossil. How much does solar PV cost in California?

About one-third of all U.S. solar PV capacity is located in California, where the average wholesale electricity price across all technologies was \$74/MWh in 2019, more than double the national average of \$36/MWh. The weighted average wholesale solar PV price in California was \$100/MWh, or more than 20% higher than the national average for solar PV.

Are solar contract prices higher than wholesale prices?

Historically, long-term contract prices from solar PV and wind auctions have been higher than wholesale prices in many large European Union markets. However, even the highest-priced onshore wind and utility scale contracts signed over the last five years are half of the average wholesale prices seen today in the European Union.

Why are solar PV prices so high?

The higher average wholesale price for solar PV relative to other technologies is partly driven by geography and timing. Wholesale electricity prices are the prices that electricity retailers, such as utilities, pay electricity producers, such as power plant owners and operators.

What drives wholesale electricity prices?

Wholesale electricity prices are driven by numerous forces, including a growing amount of wind and solar power. Market forces can include generation costs affected by fuel prices (especially natural gas), or high levels of demand driven by hot weather (such as air conditioning), or tight markets where demand is nearly equal to all available supply.

Where can I buy solar panels in the UK?

Registered in England and Wales. Company No: 09523259. VAT No: GB 215849492. Edison House, Edison Close, Ransomes Europark, Ipswich, Suffolk, IP3 9GU, United Kingdom. Solar Trade Sales wholesale distributors of solar PV panels, solar PV inverters, and solar PV mounting systems. Trade prices, full system design and UK delivery.

How much does solar power cost?

Concerning solar power, the estimate of €293/MWh is for a large plant capable of producing in the range of 50–100 GWh/year located in a favorable location (such as in Southern Europe). For a small household plant that can produce around 3 MWh/year, the cost is between 400 and €700/MWh, depending on location.
