

Will photovoltaic panels reverse current

Overview

In simplest terms a diode can be understood as a two terminal electronic device, which allows electrical current to pass in One Direction Diodes are made of a semiconductor material, usually silicon, although materials likeselenium and germanium are sometimes used in its construction. A diode only allows.

Diodes are extensively used in solar panel installations. Since the prevent backflow of current (unidirectional flow of current), they are used as blocking devices. They are also used as bypass.
