## Overview

Yes, if the solar panel is not plugged in or in the sunlight. An uncharged solar panel is entirely safe. Once the solar panel gets in any light, it will start charging. If it is in direct sunlight, it has a charge of electricity that can shock you if things go wrong. If the solar panel is part of a PV array, plugged into a set of batteries.

Getting shocked by a solar panel is a very rare event. However, even a minor shock can kill if it hits the wrong way. Workers have died from electric.

Most of the time, nothing. Solar panels are safe the vast majority of the time. Take caution around them, the same as any significant electrical appliance. (If it looks fishy, don't touch it.) The.

Approach the solar panels with some care. Look over them. Do you see any broken panels, battered cords, or loose wires?

If so, stay away and call a pro. If not, here's how to do a full check. 1) Is the solar panel plugged into the house?
