

Wind turbine investment

Overview

Wind energy falls within two major categories: utility-scale wind and distributed wind. Utility-scale wind energy is often thought of as turbines that exceed 100 kilowatts in size and those large-scale wind farms that connect to the nation's transmission system. Distributed wind systems are smaller in scale and are often.

Land-based wind energy is what most people think of when they hear the term wind power—three propeller-like blades around a rotor that sit atop a tall tower. This type of wind energy.

As if creating a wind farm on dry land wasn't difficult enough, the offshore wind segment is where turbines are connected off the coastlines around.

Investors who are not interested in picking individual equities and rather invest in a basket of shares picked by a fund manager may be.

Investors have a multitude of ways to invest in wind power depending on their risk tolerance, desired exposure, and risk tolerance. Investments can span from wind-farm operators, utility companies, manufacturers of turbines.
