

World Wind Power Generation Ranking

Overview

In 2023, China was the country with the largest energy production from wind, with some 885 terawatt hours. The United States ranked second by a wide margin, with roughly half of China's production. Which country produces the most wind power?

Key findings from the data include: China continues to dominate wind power generation with 466.5 MWh, followed by the United States at 341.4 MWh, and Germany at 132.1 MWh.

Which countries produce the most wind power in 2022?

Denmark produced 55% of its electricity from wind in 2022, a larger share than any other country. Latvia's wind capacity grew by 75%, the largest percent increase in 2022. In November 2018, wind power generation in Scotland was higher than the country's electricity consumption during the month.

Which country has the most wind power installed in 2023?

In the past years, wind energy installations have been growing rapidly. In 2023, the total wind power capacity installed worldwide surpassed one terawatt, growing by more than 100 gigawatts in comparison to the previous year. China is the leading country in terms of cumulative wind installations and newly installed wind power capacity.

Which countries are driving global wind power growth in 2023?

Global wind power installations reached a new high in 2023, increasing renewable energy's share of total power generation to 30%. China continues to be the driving force behind wind power expansion, accounting for nearly 66% of global capacity additions last year.

Which countries have the best wind power markets?

Emerging wind power markets, such as Brazil, India, and Mexico, hold their

own against traditional markets, ranking in the top 13 globally. This signifies a positive shift towards renewable energy in these rapidly developing economies.

How many GW of wind power are there in 2022?

The worldwide total cumulative installed electricity generation capacity from wind power has increased rapidly since the start of the third millennium, and as of the end of 2022, it amounts to almost 900 GW.
