Overview

How to install PV modules in hot and humid environment?

PV modules install under hot and humid weather condition. PV modules installation site is under long-term humid environment such as water floating application. To reduce the risk of PID, on the modules DC connection site, it is recommended to connect the negative to ground.

Who is responsible for solar photovoltaic (PV) systems?

This sample specification serves to assist responsible persons for solar photovoltaic (PV) systems (“responsible persons” hereafter), e.g. building owners and management agencies, to engage Registered Electrical Contractor for carrying out the installation of solar PV system.

How should a PV system be designed & installed?

From the outset, the designer and installer of a PV system must consider the potential hazards carefully, and systematically devise methods to minimise the risks. This will include both mitigating potential hazards present during and after the installation phase.

What are the requirements for a solar PV system?

All materials and equipment of the solar PV system shall be products of manufacturers certified under ISO 9001 quality assurance standard. The solar PV system shall be of proprietary product and have test certificates to prove the performance claimed.

What is a system integrator in PV industry?

System Integrator (SI) in PV industry refers to a person or company that provides design, supply, delivery, installation, commissioning and maintenance of a photovoltaic power system. Cables used must meet sufficient current-carrying capacity and are suitably rated for the environment usage. DC cables must be single-core, double-insulated.

Are all PV products covered by IEC61730 'photovoltaic (PV) module safety qualification'?

In future it is expected that all PV products will increasingly be covered by International standard IEC61730: 2004 'Photovoltaic (PV) module safety qualification'.
