

Youtube solar power system

Overview

What is solar energy for beginners?

This video is a general overview of solar energy for beginners so you can make the best possible decisions regarding solar power for your home. A solar panel (or photovoltaic panel) is a panel made of solar cells.

What is solar power & how does it work?

The core technology behind solar power systems (and solar panels) is Photovoltaic (PV) cells which converts light into usable electricity. While some people may think that this is some kind of advanced rocket science thing, it really has been around since the mid-1800s.

Which Solar System is better?

Sunnier is better. For example. A 5Kw installation consisting of 20 solar panels can produce approximately 8,000 kilowatt-hours every year if your house is in a hot and sunny state like California, but the same system will only produce approximately 6,000 kWh every year if your house is in a less sunny state like Connecticut.

How does a solar inverter work?

Solar inverters convert DC electricity into AC electricity, the electrical current appliances run on when plugged into a standard wall socket. Other types of solar technology include solar hot water and concentrated solar power. They both use the sun's energy but work differently than traditional solar panels.

How do solar panels convert solar energy into heat?

Instead, the solar panels, known as "collectors," transform solar energy into heat. Sunlight passes through a collector's glass covering, striking a component called an absorber plate, which has a coating designed to capture solar energy and convert it to heat.

Do solar panels work if there is direct sunlight?

Solar panels will work as long as there is direct sunlight. This guide will walk you through on the basics of a solar power system - Solar panels, batteries, and charge controllers. Learn how to build one yourself, produce electricity and shrink your bills!
